                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                  into peptide-containing targeting vectors for use in clinical positron emission tomography. Radiolabeling thiol-containing peptides with cliuorine-18 (F-18) comprises reacting a peptide comprising a free thiol group with a labeling reagent of formula: 18F (CH2)m-CRIR2-(CH2)m-K, or a fluorinated alkene in which at least one of the two double bonded carbon atoms bears at least one leaving group comprising 1, Br, Cl. x azide, tosylate, mesylate, nosylate or tiflate, n, m = 0-2, n+m = 0-2, coptionally substituted by 1-2 alkyl) or 3-sulfomaleimide; R1, R2 = I, Br, Cl. azide, tosylate, mesylate, triflate, H, COMH2, COOH, CH, sulfonic acid, tertiary amine, quaternary ammonium, alkyl coptionally substituted by COMH2, COOH, OH, sulfonic acid, tertiary amine or quaternary ammonium, alkyl coptionally substituted by COMH2, COOH, OH, sulfonic acid, tertiary amine or quaternary ammonium, alkyl or phenyl. The method is used for Radiolabeling peptide-containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note= "acetylated; modified with free amino acid group,
   protected amino acid group, chelating agent or a
   metal-chelate complex"
                                                                                                                                                                                                                                                                                                                                                                                                                                              targeting vectors such as proteins, antibodies, antibody fragments and receptor targeted peptides for use in routine clinical positron emission tomography. The method is simple and efficient. The method uses the unique property of the free thiol groups which are rapidly alkylated at neutral pH and moderate temperature. Sequences AAY03714-716 represent examples of F-18 labeled peptides used in the method of detecting a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunogenic peptide; bi-specific antibody; diagnosis; immune response; diseased tissue identification; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                          The invention relates to a method for incorporating 18F radionuclide

This sequence represents an immunogenic peptide for a bi-specific antibody. The invention relates to a method of treating a bi-specific diseased tissues in a patient comprising administring a bi-specific antibody (or fragment) having at at least 1 arm (A) that specifically binds a targeted tissue and at least 1 arm (B) that specifically binds a targeted tissue and at least 1 arm (B) that specifically binds cargetable conjugate. The methods and bi-specific antibodies and therapy. It is advantageous to raise bi-specific antibodies against a targetable conjugate that is capable of carrying at least 1 diagnostic or therapeutic agent. The characteristics of the chelator, metal chelate complex, therapeutic agent or diagnostic agent can be varied to accommodate differing applications without raising new bi-specific antibodies for each new application. The targetable conjugate is selected to elicit sufficient immune responses and also for rapid in vivo clearance when used within the bi-specific antibody targeting method.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; frameshift mutant; T cell response; tumour; treatment; cancer;

The present sequence represents a H2 homologue of a prolyl tripeptidyl-peptidase (designated DPP) from Porphyromonas gingivalis. The prolyl tripeptidyl-peptidase has an amidolythic activity, and cleaves a peptide bond in a target polypeptide having at least 4 amino acids. This bond is between a proline and an amino acid attached to the This bond is between a proline and an amino acid attached to the Japha-carboxyl group end of the proline. The polypeptide is useful for identifying inhibitors. These inhibitors are then useful for reducing the growth of bacterium or for protecting an animal from a periodonal disease such as ginglvitis and periodontitis caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                              Prolyl tripeptidyl-peptidase, active analog, fragment or variant useful for identifying its inhibitor which is useful for protecting an animal from a periodontal disease such as gingivitis and periodontitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 47; DB 21; Length 84

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence encoded by the gene;

(iii) comprise 0-10 amino acid from the carboxyl terminus of the normal part of the protein sequence preceding the amino terminus of the mutant sequence and may further extend to the carboxyl terminus of the mutant sequence and may further extend to the carboxyl terminus of the mutant sequence and may further extend to the carboxyl terminus of the mutant sequence and may further extend to the carboxyl terminus of the mutant part of the protein as determined by a new stop codon generated by the frameshiff mutation; and antigen presenting cell (APC), T cell response.

The genes that the peptides are derived from, are characterised as autigen presenting cell (APC), T cell response.

The genes that the peptides are derived from, are characterised as succeptible to frameshiff mutation by having a mono nucleoside base repeat sequence of at least 5 residues, or a di-nucleoside base residues corrected by the addition or deletion of 1 or 2 nucleoside base residues from the repeat sequence. The novel peptides can elicit T cell responses and toxicity against tumours and cancer cells carrying genes with cameshift mutations. The novel peptides and DNA sequences can be used concerned.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                         Peptides AAV55684-Y66142 are fragments of mutant proteins arising from a frameshift mutation in a gene from a cancer cell. The peptides are characterised in that they:

(i) are at least 8 amino acids long and a fragment of a mutant protein arising from a frameshift mutation in a gene of a cancer cell; arising from a frameshift mutation in a gene of a cancer cell; (i) consists of at least one amino acid of the mutant part of a protein consists of a cancer cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Prolyl tripeptidyl-peptidase; amidolytic activity; periodontal disease;
gingivitis; periodontitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                  New peptides derived from genes with frameshift mutations, used to develop products for the treatment and prophylaxis of cancers
                                                                                                                                                                                                                                     Saeterdal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 112,

Patent No. 5700909
GENERAL INFORMATION:
PAPLICANT: O'BLIED JOHN S.
TITLE OF INVENTION: Prosaposin and Cytokine-Derived Peptides
TITLE OF INVENTION: as Therapeutic Agents
NUMBER OF SEQUENCES: 20
CORRESPONDENCE ADDRESS:
ADDRESSE: Campbell & Flores LLP
STREET: 4770 La Jolla Village Drive, Suite 700
CITY: San Diego:
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 523;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 40; DB 1; Length 523

GENERAL INFORMATION:

APPLICANT: Nicola Nicola N.

APPLICANT: Gearing, David P.

APPLICANT: Gearing, David P.

APPLICANT: Ming, Julie Ann

TITLE OF INVENTION: Improvements in Granulocyte-Macrophage

TITLE OF INVENTION: Colony-Stimulating Factor Receptor and Derivatives Thereof

NUMBER OF SEQUENCES: 13

CORRESPONDENCE ADDRESS:

ADDRESSEE: STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C.

A38671

A38671

Deptidylglycine monooxygenase (EC 1.14.17.3) form 3 - rat (fragment)

C) Species: Rattus norvegicus (Norway rat)

C) Species: Rattus norvegicus (Norway rat)

C) Species: Rattus norvegicus (Norway rat)

C) Accession: A38671

C) Accession: A38671

A.Title: Characterization of novel mRNAs encoding enzymes involved in peptide alpha-amid A; Reference number: A38671; MUID:91107670

A.Accession: A38671

A.Status: preliminary; not compared with conceptual translation

A; Accession: A38671

A; Status: preliminary; not compared with conceptual translation

A; Residues: 17 < CMD

C; Keywords: oxidoreductase
                                                                                                                                                                                                                                                                                                                                                                                                                                      C. Species: Mus musculus (house mouse)
C. Species: No. 11-1992 #sequence_revision 17-Jul-1992 #text_change 30-May-1997
C. Accession: PT0586; PT0592

The invention relates to a method for incorporating 18F radionuclide into peptide-containing targeting vectors for use in clinical positron comparably. Radiolabeling thiol-containing peptides with floating the comprising a free thiol fluorine-18 (F-18) comprises reacting a peptide comprising a free thiol group with a labeling reagent of formula: 18F-(CH2)m-CRIR2-(CH2)n-X, or carbon atoms bears at least one leaving group comprising I. Br. Cl. azide, tosylate, mosylate, nosylate, no method is Br. Cl. azide, tosylate, mosylate, nosylate, nosylate, melainide (coptionally substituted by 1-2 alkyl) or 3-ulfomaleimide; RI, RZ = I, CL, azide, tosylate, mosylate, riflate, H, CONH2, COOH, CO, sulfonic acid, tertiary amine, quaternary ammonlum, alkyl contionally substituted by CONH2, COOH, OW, sulfonic acid, tertiary amine, quaternary ammonlum, alkyl coptionally substituted by CONH2, or COR, and RY = 1-6C alkyl or phenyl. The method is used for Radiolabeling peptide-containing trageting vectors such as proteins, antibodies, antibody fragments and receptor targeted peptides for use in routine clinical positron comparapy. The method is simple and efficient. The method uses the unique property of the free thiol groups which are rapidly alkylated at neutral pH and moderate temperature. Sequences AAV03714-716 represent termorating a them thod of detecting a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents an immunogenic peptide for a bi-specific antibody. The invention relates to a method of treating a bi-specific diseased tissues in a patient comprising administering a bi-specifically antibody (or fragment) having at all least 1 arm (A) that specifically binds a targeted tissue and at least 1 arm (B) that specifically binds a targetable conjugate. The methods and bi-specific antibodies and therapy. It is advantageous to raise bi-specific antibodies against a targetable conjugate that is capable of carrying at least 1 diagnostic or therapeutic agent or diagnostic agent can be varied to complex, therapeutic agent or diagnostic agent can be varied to accommodate differing applications without raising new bi-specific antibodies for each new application. The targetable conjugate is selected to elicit sufficient immune responses and also for rapid in vivo clearance when used within the bi-specific antibody targeting method.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

into peptide-containing targeting vectors for use in clinical positron cantsion tomography. Radiolabeling thiol-containing peptides with carission tomography. Radiolabeling thiol-containing peptides with carission tomography. Radiolabeling thiol-containing peptides with carission tomography. Radiolabeling thiol-containing peptides with a labeling reagent of formula: 18F-(CH2)m-CRIR2-(CH2)n-X, or a fluorinated alkene in which at least one of the two double bonded carbon atoms bears at least one leaving group comprising I, Br, Cl, azide, tosylate, nosylate, or triflate, n = 0-2; n+m = 0-2; x = 1, Br, Cl, azide, tosylate, mosylate, orsylate, triflate, maleimide (optionally substituted by 1-2 alkyl) or 3-sulfomaleimide; Rl, R2 = I, Br, Cl, azide, tosylate, mesylate, nosylate, triflate, H, CONH2, COOH, OH, sulfonic acid, tertiary amine, quaternary ammonium, alkyl or or quaternary ammonium, cOOK, COOH, OH, sulfonic acid, tertiary amine, corresponded for Radiolabeling peptide-containing correspond is used for Radiolabeling peptide-containing creeptor targeting vectors such as proteins, antibodies, antibody fragments and erceptor targeted peptides for use in routine clinical positron containing property of the free thiol groups which are rapidly alkylated at neutral pH and moderate temperature. Sequences AAY03714-716 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents an immunogenic peptide for a bi-specific antibody. The invention relates to a method of treating or identifying diseased tissues in a patient comprising administering a bi-specific antibody (or fragment) having at at least 1 arm (A) that specifically binds a targeted tissue and at least 1 arm (B) that specifically binds a targetable conjugate. The methods and bi-specific antibodies and fusion proteins are useful for pre-targeting methods of diagnosis and therapy. It is advantageous to raise bi-specific antibodies against a targetable complex, therapeutic agent or diagnostic antibodies against a targetable complex, therapeutic agent or diagnostic agent can be varied to accommodate differing applications without raising new bi-specific antibodies for each new application. The targetable conjugate is selected to elicit sufficient immune responses and also for rapid in vivo clearance when used within the bi-specific antibody targeting method.
                                                                                                                                                                                                                                                                                                                                                                              _note= "acetylated; modified with free amino acid group,

This peptide corresponds to amino acid residues 296-302, in the non-conserved region 1, of the outer membrane protein CopB (see AMW4621) of Moraxella catarrhalis strain 035E. Claimed isolated peptides of about 5-60 amino acid residues comprise at least this 7-amino acid peptide sequence and are reactive with monoclonal antibody 10F3. The 7-amino peptide is most preferred for binding to 10F3. It is located C-terminal to the Asn-295 cesidue of CopB that influences the binding kinetics of the epitope. Peptides which contain residues C-terminal to Asn-295 retain reactivity, but this reactivity is less than that obtained in the presence of Asn-295. Claimed peptides (see AAW46274-84) from non-conserved region 1 can be used in the diagnosis, prophylaxis (as vaccines) and treatment of M. catarrhalis infections.
                                                                                                                                          New isolated Moraxella catarrhalis peptide(s) - which define epitopes of the outer membrane protein used to develop products for the diagnosis, prophylaxis and treatment of infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated Moraxella catarrhalis peptide(s) - which define epitopes of the outer membrane protein used to develop products for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           outer membrane protein; epitope; infection; diagnosis;

                                   Lycium; angiotensin converting enzyme; renin; hypertension; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This lycium B peptide has angiotensin converting enzyme (ACE) and renin inhibiting activity and can be used in the treatment of hypertension. It is used in the form of a drug compsn. Residue 4 (GIY) is modified by calcium and residue 8 (Trp) has an indol gp.
